

CodeScience for Work.com

Options to help ISVs accelerate Work.com strategy

The Problem:

In May 2020, Salesforce released Work.com with the specific intent for ISVs to add value in support of the back to work initiative.

This offer created both opportunity and challenges for a select group of ISVs: Those that can add incremental value and those that have a technical team with the knowledge and time to make fast product innovations onto the new Work.com technology.

Work.com will present three challenges for ISVs:

- 1) Identifying the white space to add value into a managed package you've never seen before
- 2) Making changes to your App and ensuring that you don't break your existing managed package
- 3) Having the engineering capacity to meet the Salesforce marketing deadlines

The ISVs who move quickly gain the opportunity to thrive as Salesforce makes the back to work push to private and public sectors.

The Solution:

Over the last 12 years, we have built 10% of the Apps on the AppExchange. That experience has exposed us to challenging builds and deep knowledge of how to work with the Salesforce Platform to support our ISV clients.

For ISVs capable of putting your current backlog on hold but do not have the know-how of Work.com, we offer Ask An Expert subscription service. For a small monthly subscription, your team can raise a question with our team and be answered directly back, 1-on-1 via email or Zoom.

For ISVs with no capacity, we can completely outsource your product development in order to meet the deadlines.

Benefits:

Ask an Expert

- Low cost subscription service with access to the teams that built the Work.com Command Center for Salesforce.
- Experts with the know-how: architects, front-end and back-end developers, UX designers, QA, QE, and product owners.
- High-level technical advising.
- Integration patterns consultation.
- Your team does the actual build.

Outsourced Product Development

- CodeScience's experts can build your product in collaboration with your product managers to highlight your value proposition within the Command Center.
- Completely outsourced and turnkey design, development, and testing.
